¹ Including gas condensate.

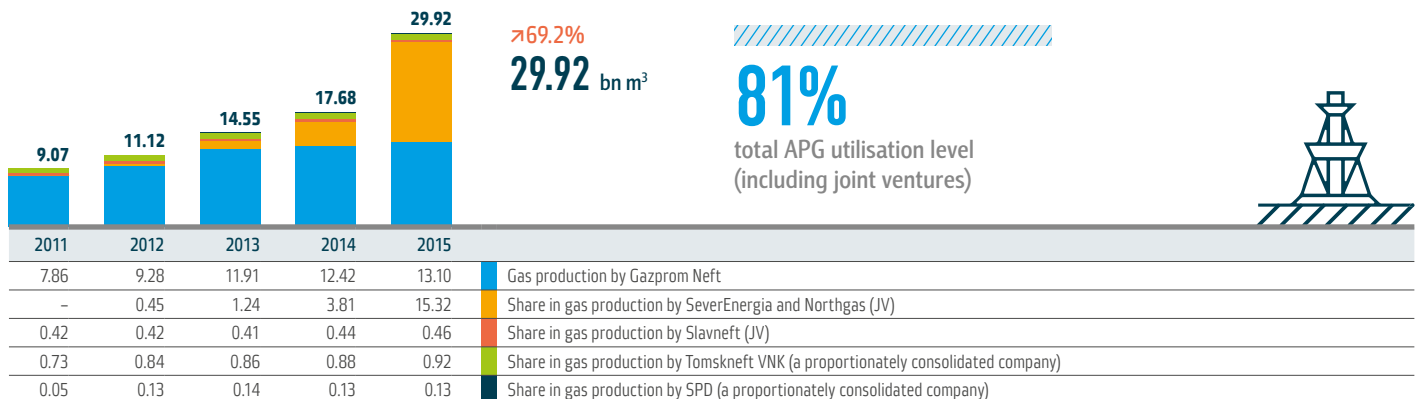

GAS PRODUCTION // The Company is actively developing gas production operations with a focus on commercialising reserves of associate and natural gas produced at oil fields and increasing their value.

The gas programme of the Gazprom Neft Group provides for accelerated growth in gas production in Russia. The target is for production/use of gas to increase to 31.55 billion m³ in 2016 from 29.92 billion m³ in 2015.

The development of small gas deposits that make up a part of the fields at which Gazprom Neft is already working will enhance the cost-effective use of the Company's reserves and help increase hydrocarbon production to 100 million TOE per year as envisaged by the Company's development strategy to 2025.
